

```

import React, { Component } from 'react';
import { View, Text, TextInput, Button } from 'react-native';

class Input extends Component {
  constructor() {
    super();
    this.state = {
      name: '',
      counter: 0
    }
  }
  onPress = () => {
    this.setState({ counter: this.state.counter + 1 })
  }

  render() {
    return (
      <View>
        <TextInput
          style={{ height: 40 }}
          placeholder="Enter your name"
          onChangeText={text => this.setState({ name: text
            default value={this.state.name}
          />
          <Text>Your name is : {this.state.name}</Text>
          <Button
            onPress={this.onPress}
            title="Press Me"
            color="#841584"
          />
          <Text>Counter: {this.state.counter}</Text>
        </View>
      )
    )
  }
}

export default Input;

```
